Table of Contents 7

Overview of Tables and Graphs 10

Summary 11

Introduction 15

Chapter 1 – Hypotheses and Theory 19

1.1 Deriving Hypotheses from Theory 19
1.1.1 Neorealist hypothesis 19
1.1.2 Institutionalist hypothesis 21
1.1.3 Liberal hypothesis 24
1.2 Dealing with problems in measuring power 26
1.3 Other attempts at classifying power 29
1.4 Summary of the Chapter 35

Chapter 2 – The Dependent Variable 37

2.1 Requirements of a quantitative methodology 37
2.1.1 Assuming internal benefits of organisation membership 38
2.1.2 Presence of state agency and interest 39
2.1.3 Sufficiently transparent decision-making procedures 42
2.1.4 The sufficient data requirement 44
2.2 The Example of the United Nations 45
2.2.1 Elections by the General Assembly 45
2.2.2 Elections by the Economic and Social Council 47
2.2.3 Number of committees and seats 50
2.2.4 The Regional Groups within the UN 52
2.3 Recording election results 54
2.3.1 Qualitative Questionnaire 59
2.4 Recording committee memberships 60
2.5 Summary of the Chapter 66

Chapter 3 – Measuring the constituents of power 69

3.1 Realist proxy variables 70
3.1.1 Territory 70
3.1.2 Population 71
3.1.3 Natural resources 72

3.1.4 Economic means 72
3.1.5 Total Government Spending 73
3.1.6 Government spending on international politics 74
3.1.7 Military means 75
3.1.8 Expenditure on the Foreign Service 76
3.2 Institutionalist proxy variables 78
3.2.1 Expenditure on membership in international organisations 78
3.2.2 Contributions to the United Nations regular budget 80
3.2.3 Size of a state's representation at the UN headquarters in NY 81
3.2.4 Development Aid 83
3.2.5 Asymmetric trade relationships 84
3.3 Liberal proxy variables 85
3.3.1 Public Opinion 86
3.3.2 Perceptions of Freedom 87
3.3.3 Perceptions of Standard of Living 88
3.3.4 Linguistic and cultural similarities 90
3.3.5 Public Diplomacy 90
3.4 Summary of the Chapter 91

Chapter 4 – Methodological approach and data exploration 93
4.1 Degree of Linearity of the Independent Variables 95
4.2 Factor Analysis 97
4.2.1 Results of the Factor Analysis 98
4.2.2 The Neorealist Factor 100
4.2.3 The Institutionalist Factor 101
4.2.4 The Liberal Factor 102
4.3 Stationarity of the data 104
4.3.1 Testing for stationarity 104
4.3.2 Testing for cointegration 107
4.3.3 Error-correction to deal with non-stationarity 107
4.4 Testing lag structure 111
4.4.1 Consistent and efficient estimation 111
4.4.2 Testing for specification and autocorrelation 112
4.5 The general-to-specific methodology 114
4.5.1 Finding the right specification 115
4.5.2 Outlier analysis 117
4.5.3 Further diagnostic tests 120
4.5.3.1 Multicollinearity 121
4.5.3.2 Residual plot 121
4.5.3.3 Normality Assumption 122
4.6 Summary of the Chapter 122

Chapter 5 – Interpretation and Sensitivity Analysis 125
5.1 Regression results 127
5.2 Sensitivity Analysis 128

5.2.1 Sensitivity Analysis without Outlier Cases 130
5.2.1.1 Analysis with Added short-term Neorealist Variable 131
5.2.1.2 Analysis with Added short-term Institutionalist Variable 132
5.2.1.3 Analysis with Added Liberal Variables 132
5.2.2 Sensitivity Analysis with Outlier Cases 133
5.2.3 Summary of the Sensitivity Analyses 134
5.3 Summary of the Chapter 134

Summary and Conclusion 137

Bibliography 143

Data Sources 149

Note on Statistical Data Appendix 151
